1. The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:

It does not identify the mailing or post office address of each inventor. A mailing or post office address is an address at which an inventor customarily receives his or her mail and may be either a home or business address. The mailing or post office address should include the ZIP Code designation. The mailing or post office address may be provided in an application data sheet or a supplemental oath or declaration. See 37 CFR 1.63(c) and 37 CFR 1.76.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Labor in view of Kuo Figure 3.
4. Labor discloses an exercise bag comprising an enclosure (12) said enclosure having a bottom, a removable top, curving side surfaces, a water tight container and strapped loops (22).
5. Labor however does not disclose a device wherein it includes a padded structure which envelopes said water container.
6. Kuo Figure 3 however discloses a foam block (32) which envelopes a water tight container.

Art Unit: 3764

7. Given the above teaching of Koo, the examiner notes that it would have been obvious to one of ordinary skill in the art to envelope the water container of Labur with foam for the purpose of providing a feel of softness resiliency and a realistic feel.

8. As to the water container being manufacture of poly-vinyle and the foam being manufacture of closed celled foam, the examiner notes that poly-vinyle and closed cell foam are obvious and known component used in the manufacture of fluid containers and cushioning material.
